

August 15 2007**FEFO 07-14****ILLINOIS FARM REAL ESTATE VALUES CONTINUE DOUBLE DIGIT INCREASES**

Each year the National Agricultural Statistics Service of the USDA releases estimated average farm real estate values and cash rents by state. The estimates are based on surveys of farmers from selected geographical areas. The surveys follow strict statistical guidelines. Estimated values maybe revised the following year based on additional information. Revisions may also be made based on data from the 5-year Census of Agriculture. The methodology and timing of the study has changed over time but the statistical information provides some insight as to the changes in farm real estate values from year to year.

AVERAGE ILLINOIS FARM REAL ESTATE VALUE

The average Illinois farm real estate values from 1970 through 2007 are listed in Table 1 and graphically in Figure 1. The average farm real estate value for Illinois in 2007 was \$4,330 per acre, the highest on record. This includes the value of all land and buildings. The figure was 13.9 percent higher than the 2006 average of \$3,800 per acre. The 2007 increase marked the third year in a row of double digit increases. The 2005 value increased 27.6 percent and the 2006 value increased 14.1 percent. The 2007 percent increase was the third highest since 1979. Farm real estate values have shown a year over year increase every year since 1988, or twenty consecutive years. Since 2000, Illinois farm real estate values have increased 92 percent.

Since 1970, average farm real estate values have declined only five times as compared to the previous year. Those years were 1982, 1983, 1985, 1986 and 1987. There have been four years when farm real estate values increased over 20 percent, in 1974, 1976, 1977 and 2005. The largest increase was in 1977 when values rose 37.3 percent.

From 1994 through 1999, average farm real estate values increased between 4.2 % and 9% annually. From 2000 to 2004, farm real estate increased between 1.3% and 7.4%. Since 2004, the increase in farmland values has averaged 18.5%. The current strength in farmland values seems to be driven by higher corn and soybean prices and expectation that these prices will remain high due to strong demand.

The farm real estate value data is used to construct index numbers of Illinois farmland values. The index can be found at the *farmdoc* website. http://www.farmdoc.uiuc.edu/manage/land_value.asp
